

TIMELINE PROJECT PLANNING

3 Months

2014

- **Milestone #1:** Application development outline thought out and approved + Objective-C syntax overview
- **Milestone #2:** An initial version of the app with half of the scenes from the proposal in place and functional; basic intent will be clear and implemented.
- **Milestone #3:** Additional progress towards implementing the app. Three-quarters of the scenes from the proposal will be in place and functional; basic intent will be clear and implemented, and transitioning between them will also be implemented. An initial data model to support the application functionality will be in place and utilized by at least one part of the application.
- **Milestone #4:** Significant progress towards implementing the app. All of the scenes from the project proposal will be in place and mostly functional. Transitions between the scenes will be implemented. The data model will contain all necessary entities and be utilized at least partially by all relevant scenes.
- **Milestone #5:** App will be fully completed to specifications of proposal functionality. Extravagant user interface design will be completed, time pending.
